Immatics

Corporate Presentation, October 2020

Forward Looking Statement

This presentation (“Presentation”) is provided by Immatics N.V. (“Immatics” or the “Company”) for informational purposes only. The information contained herein does not purport to be all-inclusive and Immatics nor any of its affiliates nor any of its or their control persons, officers, directors, employees or representatives makes any representation or warranty, express or implied, as to the accuracy, completeness or reliability of the information contained in this Presentation. You should consult your own counsel and tax and financial advisors as to legal and related matters concerning the matters described herein, and, by accepting this presentation, you confirm that you are not relying upon the information contained herein to make any decision.

Forward-Looking Statements. Certain statements in this presentation may be considered forward-looking statements. Forward-looking statements generally relate to future events or the Company’s future financial or operating performance. For example, statements concerning timing of data read-outs for product candidates, the IND filing for IMA204, IMA301, IMA401, the Company’s focus on partnerships to advance its strategy, projections of future cash on hand and other metrics are forward-looking statements. In some cases, you can identify forward-looking statements by terminology such as “may”, “should”, “expect”, “intend”, “will”, “estimate”, “anticipate”, “believe”, “predict”, “potential” or “continue”, or the negatives of these terms or variations of them or similar terminology. Such forward-looking statements are subject to risks, uncertainties, and other factors which could cause actual results to differ materially from those expressed or implied by such forward looking statements. These forward-looking statements are based upon estimates and assumptions that, while considered reasonable Immatics and its management, are inherently uncertain. New risks and uncertainties may emerge from time to time, and it is not possible to predict all risks and uncertainties. Factors that may cause actual results to differ materially from current expectations include, but are not limited to, various factors beyond management's control including general economic conditions and other risks, uncertainties and factors set forth in the Company’s filings with the Securities and Exchange Commission (SEC). Nothing in this presentation should be regarded as a representation by any person that the forward-looking statements set forth herein will be achieved or that any of the contemplated results of such forward-looking statements will be achieved. You should not place undue reliance on forward-looking statements, which speak only as of the date they are made. Company undertakes no duty to update these forward-looking statements.

No Offer or Solicitation. This communication is for informational purposes only and does not constitute, or form a part of, an offer to sell or the solicitation of an offer to sell or an offer to buy or the solicitation of an offer to buy any securities, and there shall be no sale of securities, in any jurisdiction in which such offer, solicitation or sale would be unlawful prior to registration or qualification under the securities laws of any such jurisdiction. No offer of securities shall be made except by means of a prospectus meeting the requirements of Section 10 of the Securities Act of 1933, as amended, and otherwise in accordance with applicable law.

Certain information contained in this Presentation relates to or is based on studies, publications, surveys and the Company’s own internal estimates and research. In addition, all of the market data included in this presentation involves a number of assumptions and limitations, and there can be no guarantee as to the accuracy or reliability of such assumptions. Finally, while the Company believes its internal research is reliable, such research has not been verified by any independent source. This meeting and any information communicated at this meeting are strictly confidential and should not be discussed outside your organization.

Key Elements to Build a Global Leader in TCR-based Immunotherapies

Immatics' proprietary platforms create a leadership position in the TCR therapeutics space

- Two highly differentiated technology platforms for the discovery of pHLA targets & T cell receptors
- Foundation to achieve the next advance in immunotherapy, particularly for solid tumors
- Platforms validated by multiple strategic collaborations with oncology-focused global leaders incl. Amgen, Genmab, BMS, GSK and MD Anderson Cancer Center

Immatics is advancing a proprietary pipeline of Adoptive Cell Therapies (ACT) & TCR Bispecifics

- Four ACT programs in clinical development covering a broad range of solid cancers
- Two TCR Bispecifics programs with off-the-shelf availability in advanced preclinical development
- Next-Generation personalized multi-target approach designed to achieve durable clinical responses

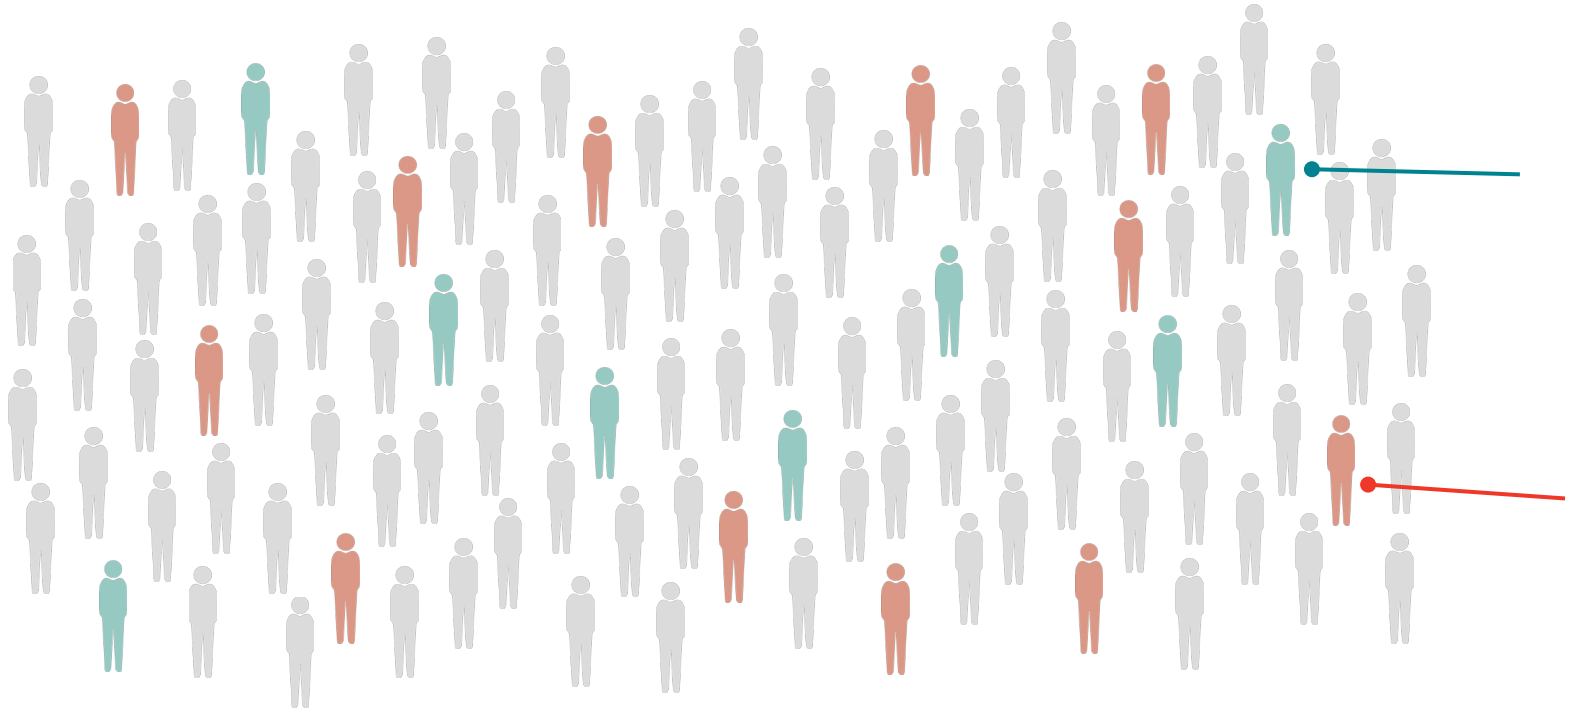
Immatics builds on sustainable fundamentals

- Strong IP estate & worldwide rights retained on lead programs
- Approx. $320m of cash on the balance sheet post NASDAQ debut and a cash runway of 3+ years
- Supported by a strong shareholder base of premier US and European shareholders

Developing Targeted Therapeutics to Patients with Solid Cancers

… in whom Current Immunotherapies Have Limited Efficacy

Most cancer patients do not benefit from current immuno-oncology approaches



Checkpoint inhibitors
Clinical benefit mainly in patients with tumors with high mutational burden
minority of all cancers*

CAR-T
Clinical benefit mainly in patients with hematological indications
minority of all cancers**

Immatics is turning limitations into opportunities by
Developing TCR-based immunotherapies with the aim to offer a targeted therapy to patients with high medical need

*Chalmers *et al.*, 2017 **SEER Cancer Statistics Review, 1975-2017, Estimated New Cancer Cases for 2020

pHLA Targets Identified on Human Cancer Cells by Our Technology Platform

Discovery of True Cancer Targets – XPRESIDENT® Technology Platform

Prioritization of >200 pHLA Targets Covering All Target Classes

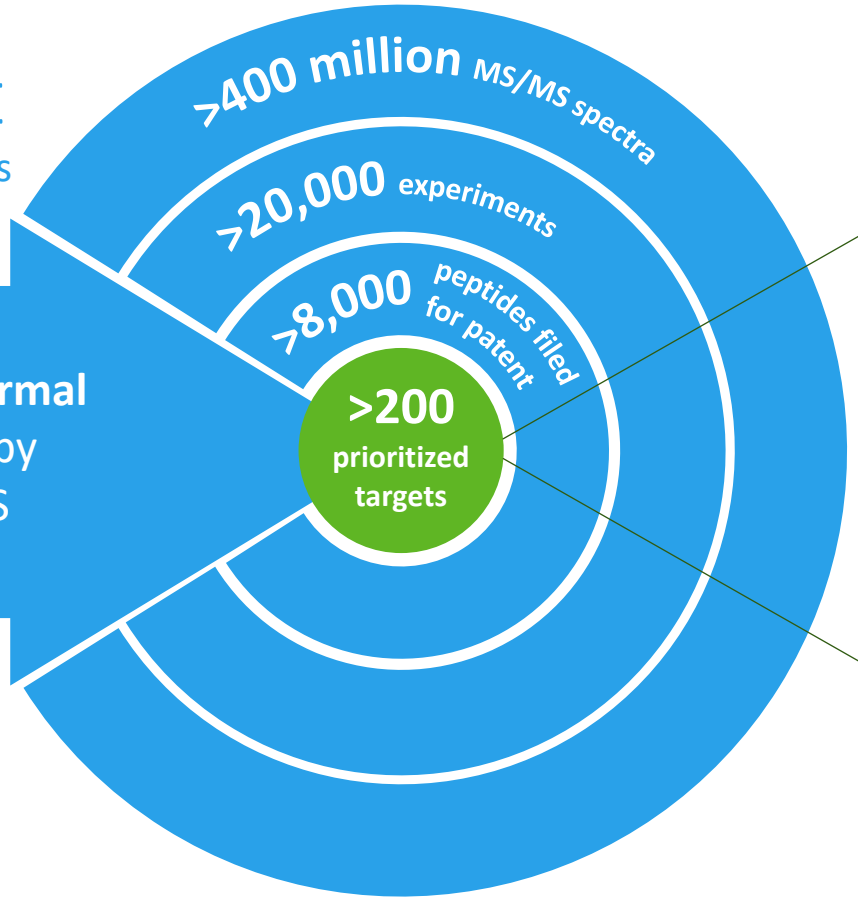
Cancer tissues
20 major indications

&

Normal tissues
40 tissue types covering all major organs

pHLA DATABASE
based on primary tissues

>2,000 cancer & normal tissues analyzed by Quantitative MS



TARGET CLASSES

1. **Well known and characterized parent protein** e.g. MAGE family cancer testis antigens
2. **Unknown or poorly characterized parent protein** e.g. stroma target COL6A3 exon 6
3. **Crypto-targets/Neoantigens**: Novel target class which includes RNA-edited peptides and non-classical neoantigens

COMPETITIVE ADVANTAGES

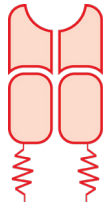
- Leading LC-MS/MS based pHLA target discovery platform
- Discovery of most relevant naturally presented targets
- Ultra-sensitive (attomolar range) & quantitative (copy number per tumor cell)
- Extensive data set on normal tissues

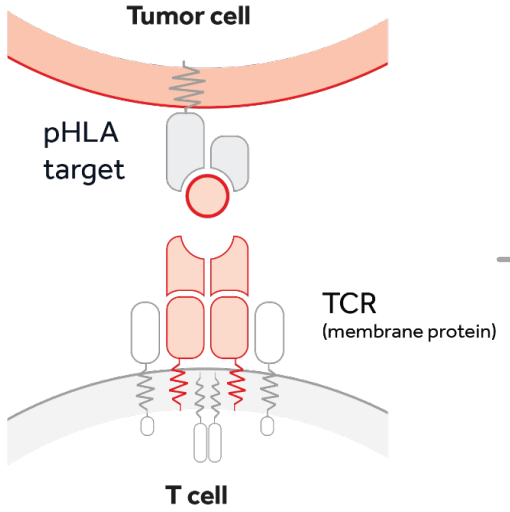
Development of the Right TCR for Two Modalities – ACT and Bispecifics

By Our XCEPTOR™ Technology Platform

Adoptive Cell Therapy

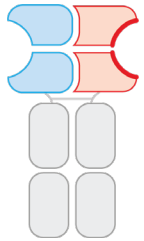
ACTengine®
ACTallo®





TCR Bispecifics

T cell engaging receptor (TCER™)



Natural or optimized natural TCR with **micromolar affinity** and favorable **specificity** profile

for genetic engineering of autologous and allogeneic T cells and direct clinical application

Proprietary **XCEPTOR™** Platform
TCR Discovery,
Engineering and Validation

Fast and efficient discovery of **multiple TCRs per target**

Affinity-maturated natural TCR variable domains with **nanomolar affinity** and favorable **specificity** profile

Highly potent TCR Bispecifics format with **extended half-life** and **antibody-like stability** and manufacturability

Platform Interaction Allows for Early De-selection of Cross-Reactive TCRs

"Fail Early Approach" Increases Focus on Most Promising TCR Candidates

Clinical fatalities have occurred in TCR-T trials using a titin cross-reactive TCR (published 2013)

XPRESIDENT®-guided toxicity screening to prevent safety issues

Candidate target/ TCR

Determination of TCR binding motif

XPRESIDENT® search for relevant off-target peptides

XPRESIDENT® database:
Titin peptide ESDPIVAQY strongly **presented** on all investigated HLA-A*01+ normal heart tissue samples.

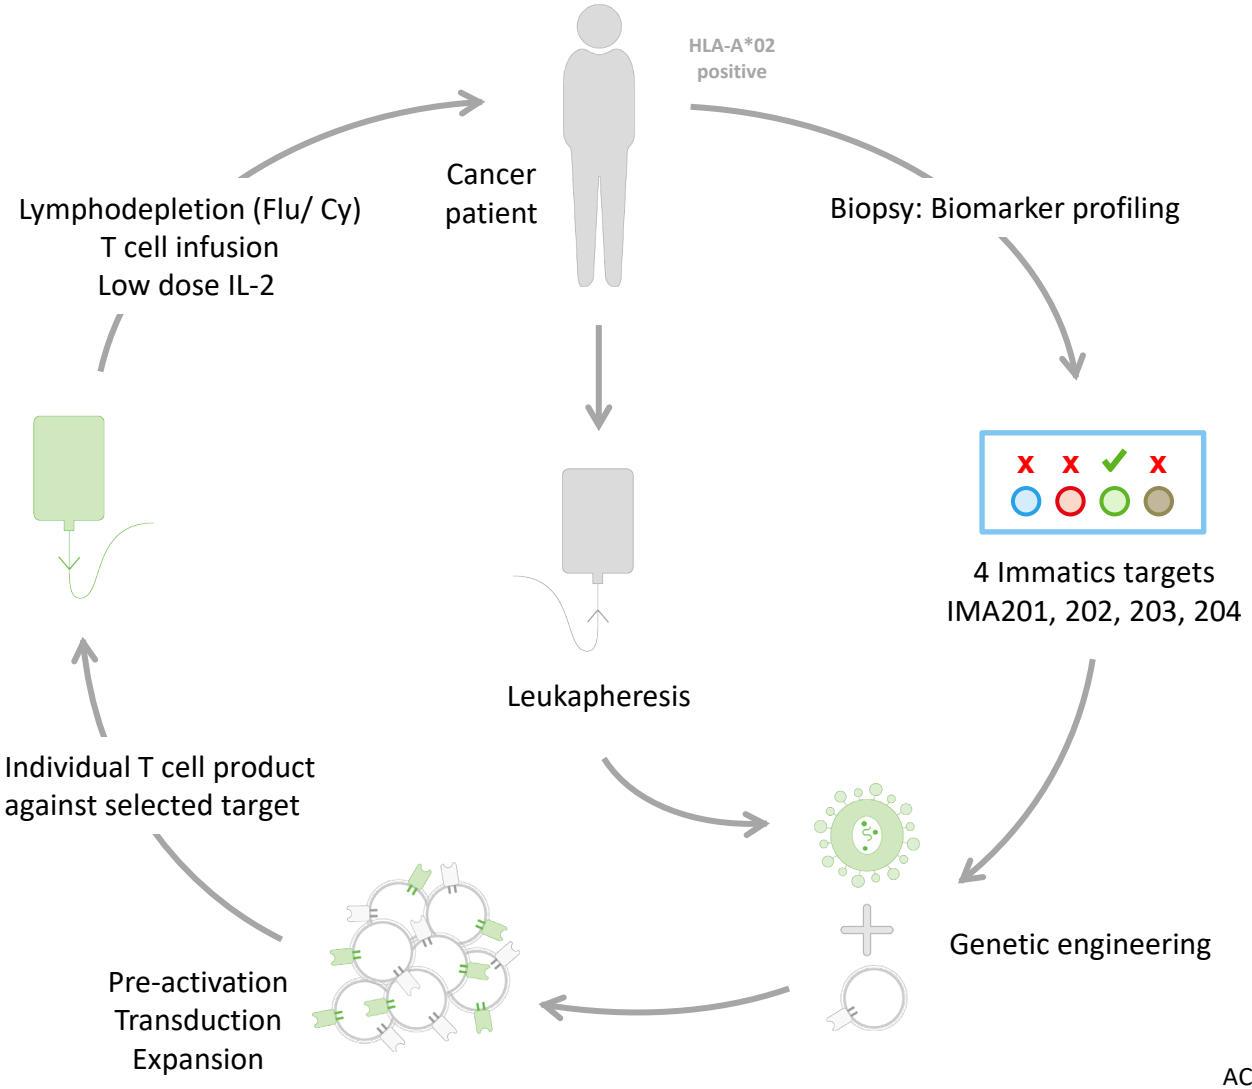
ACTengine® – Engineered TCR-T Therapy

Autologous, Genetically Modified T cells Expressing a Novel TCR



ACTengine® IMA200 Series

Approach	• Proprietary TCR • One target/ TCR per trial
Study Design	• 3 First-in-human trials ongoing (IMA201, IMA202, IMA203) • 4th IND planned for 2021 (IMA204) • Dose escalation cohorts to establish safety (2+2 or 3+3 design) • Expansion cohort for signal finding (9-12 patients)

ACTengine® programs are supported by a grant of the Cancer Prevention & Research Institute of Texas (CPRIT)

Optimized Manufacturing for Younger T cells & Timely Patient Infusion

Established cGMP Capacities to Advance Next-Generation Cell Manufacturing Developments

Leukapheresis

IMA203: 20 days

Manufacturing time (6 days)	QC testing (Full sterility, 14 days)

Key plans: Commercial ACTengine® expected 11 days

Manufacturing time (6 days)	Expedited QC testing (5 days sterility)

Infusion-Ready

Manufacturing by Immatics Personnel for ongoing ACT programs

- ✓ Proprietary short manufacturing process designed to produce phenotypically younger, better persisting T cells
- ✓ T cell products are manufactured at the Evelyn H. Griffin Stem Cell Therapeutics Research Laboratory in collaboration with UTHealth, in **Houston, TX**
- ✓ 1,850 square foot state-of-the-art **cGMP Facility** operated by Immatics personnel
- ✓ Capacity: up to 48 manufacturing runs/month

ACTengine® Targets Are Prevalent and Display High pHLA Copy Numbers

Comparison of Our Frontrunner Targets to Clinically Validated NY-ESO-1

		Ongoing clinical ACTengine® trials			IND in 2021
	NY-ESO-1[5]	**MAGEA4/A8** **IMA201**	**MAGEA1** **IMA202**	**PRAME** **IMA203**	**COL6A3 exon 6** **IMA204**
Naturally presented	Yes[1]	Yes[2]	Yes[2]	Yes[2]	Yes[2]
Specificity class[3]	1	1	1	1	2
Number of pHLA copies per cell	10-50[4]	100-1,000[2]	50-900[2]	100-1,000[2]	100-700[2]
Tumor types with significant prevalence	Synovial sarcoma (80%) Melanoma (40%) HCC (40%) …	Sq NSCLC (50%) HNSCC (35%) Bladder carcinoma (30%) Uterine carcinosarcoma (25%) Esophageal carcinoma (25%) Ovarian carcinoma (20%) Melanoma (20%) Sarcoma Subtypes (up to 80%) …	HCC (40%) Sq NSCLC (35%) Melanoma (30%) Bladder carcinoma (20%) Esophageal carcinoma (20%) HNSCC (15%) Sarcoma Subtypes (up to 30%) …	Uterine carcinoma (100%) Melanoma (95%) Ovarian carcinoma (80%) Sq NSCLC (65%) Uveal melanoma (50%) Cholangiocarcinoma (35%) Diffuse large B-cell lymphoma (30%) Breast carcinoma (25%) HNSCC (25%) Sarcoma Subtypes (up to 100%) …	Pancreatic carcinoma (80%) Breast carcinoma (75%) Stomach carcinoma (65%) Sarcoma (65%) Esophageal carcinoma (60%) NSCLC (55%) HNSCC (55%) Uterine carcinosarcoma (55%) Colorectal carcinoma (45%) Mesothelioma (45%) Ovarian carcinoma (40%) Cholangiocarcinoma (40%) Melanoma (35%) Bladder carcinoma (35%) …

Immatics' clinical frontrunner targets show specificity profiles similar to NY-ESO-1 while having significantly higher peptide copy numbers

1 Natural presentation of this peptide has been validated by clinical data, **2** Validated by XPRESIDENT® mass spectrometry. Target peptide copy numbers per cell were determined by AbsQuant™ technology, **3** Internal specificity categorization used at Immatics. Specificity class 1: peptide not routinely found on any normal tissue; no relevant RNA expression detected on critical organs, Specificity class 2: peptide showing a large therapeutic window with detections on normal tissue and low RNA expression on critical organs. **4** Purbhoo *et al.*, J Immunol 176:7308-7316 (2006), **5** Robbins *et al.*, J Clin Onco 29(7): 917-924 (2011). Target prevalences for ACTengine® targets are based on TCGA data combined with a XPRESIDENT®-determined target individual MS-based mRNA expression threshold.

ACTengine® - Initial Safety and Persistence of T cells

Initial Data from IMA201, IMA202 and IMA203 as of 1Q 2020

Studies Enrollment Status

- Products successfully manufactured for 10/10 patients
- **First 4 patients** treated across IMA201, IMA202 and IMA203 trials at lowest dose of dose escalation scheme (50 million specific T cells/m² → 5-10% of anticipated target dose at end of dose escalation)

Preliminary Biological Activity and Safety Data

- Very high frequencies of persisting circulating target-specific T cells observed at lowest infused dose (up to 45%)
- Current longest observation period is 12 weeks – during this time T cells persist
- Serial biopsy analysis demonstrates infiltration of target-specific T cells into post-treatment tumor biopsies
- ACTengine® treatment is well-tolerated to date with no changes to treatment regime required
- Next combined data read-out expected in 1Q 2021

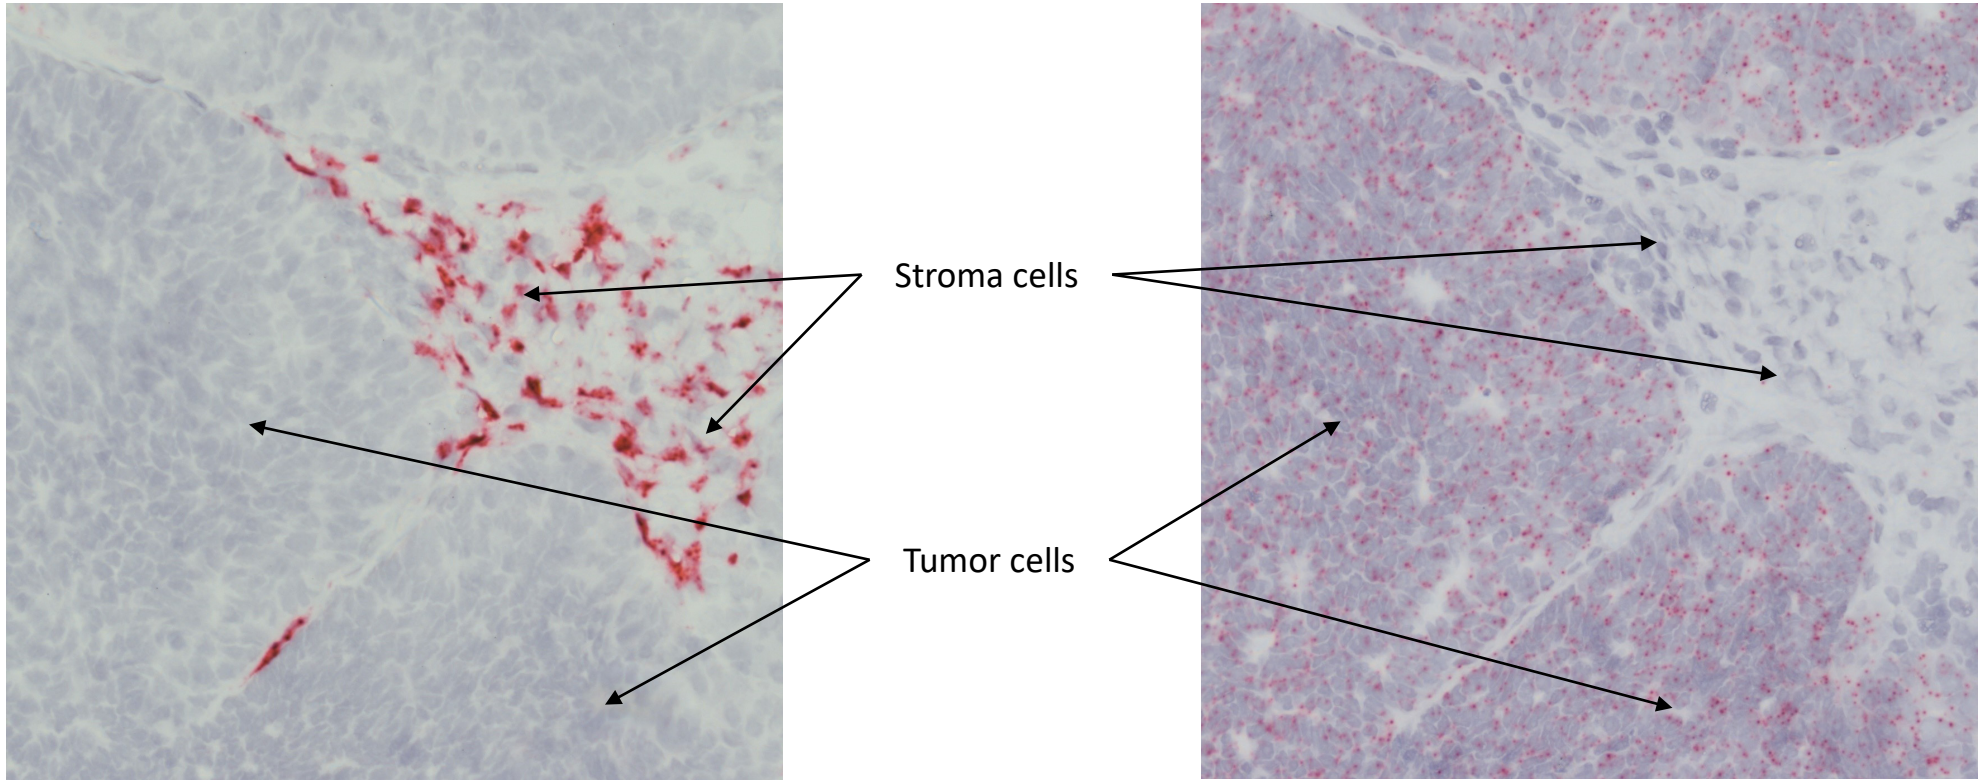
ACTengine® IMA204 – Disrupting the Tumor's Protective Microenvironment

Immatics' Novel Tumor Stroma Target COL6A3 Exon 6

Stroma Target (COL6A3 exon 6)
in an Ovarian Cancer sample

Example of a Tumor Target
in the same Ovarian Cancer sample

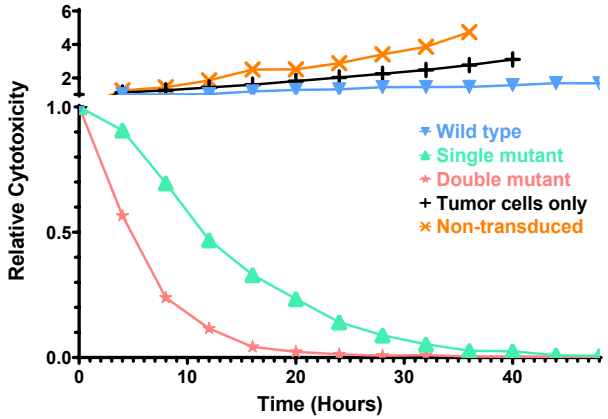


COL6A3 exon 6 is prevalently expressed at high copy numbers in the tumor stroma across many solid cancers

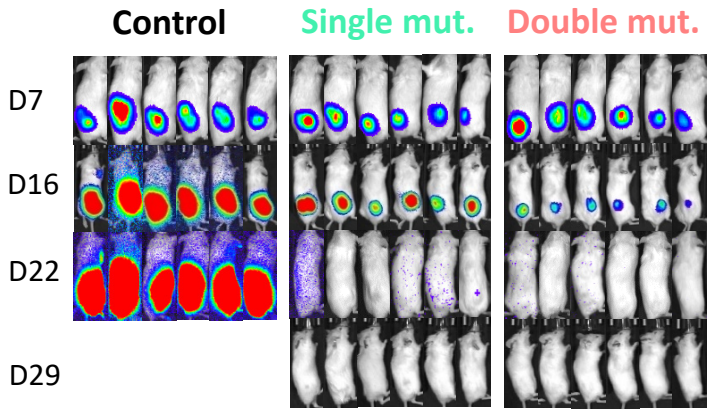
ACTengine® IMA204 – Complete Tumor Eradication *in vitro* and *in vivo*

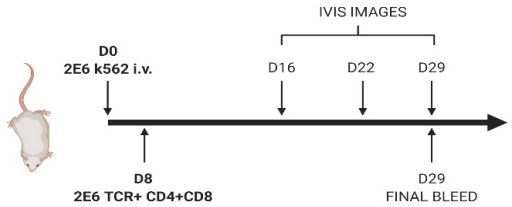
Two Affinity-enhanced TCR Candidates with High Avidity, Specificity and Potency for IMA204

in vitro



in vivo*



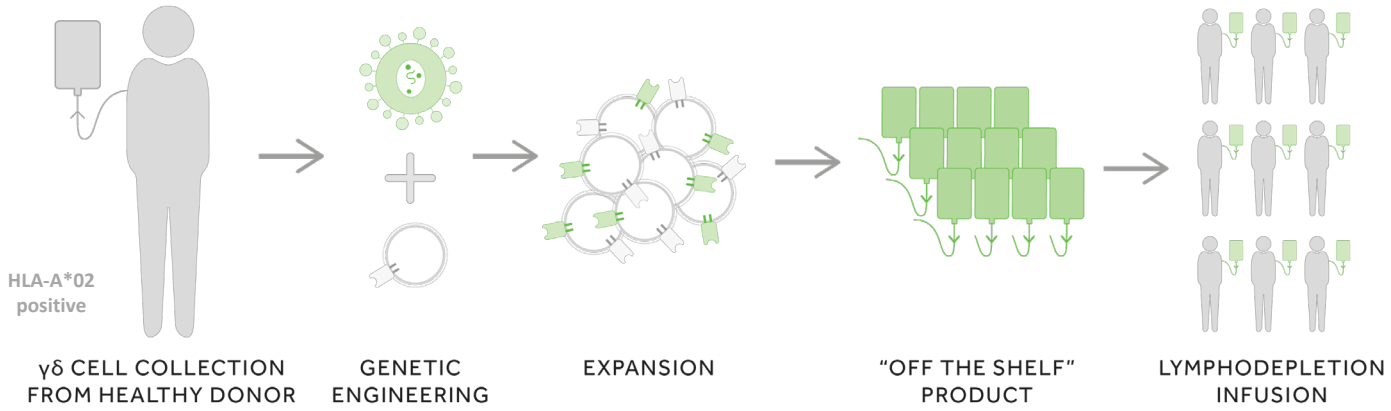


- **Two affinity-enhanced TCRs with excellent pre-clinical properties *in vitro* and *in vivo***
- **One of the candidates shows full functionality also in CD4+ T cells without requirement for a CD8 co-receptor**
- **Final preclinical safety evaluation of the target and the two candidate TCRs ongoing**
- **IND submission on track for 2021**

**In vivo data by Jim Riley, University of Pennsylvania, control – non transduced T cells. TCR avidity and specificity data not shown, available in IMA204 presentation on Immatics website.*

ACTallo® – Next Generation Off-the-shelf TCR-T Therapy

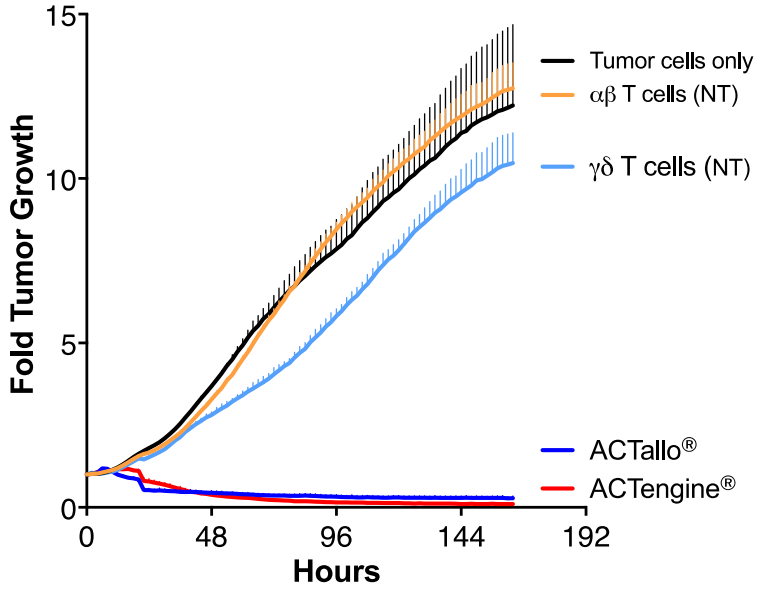
Allogenic, Genetically Modified γδ T cells Expressing a Novel TCR



γδ T cells

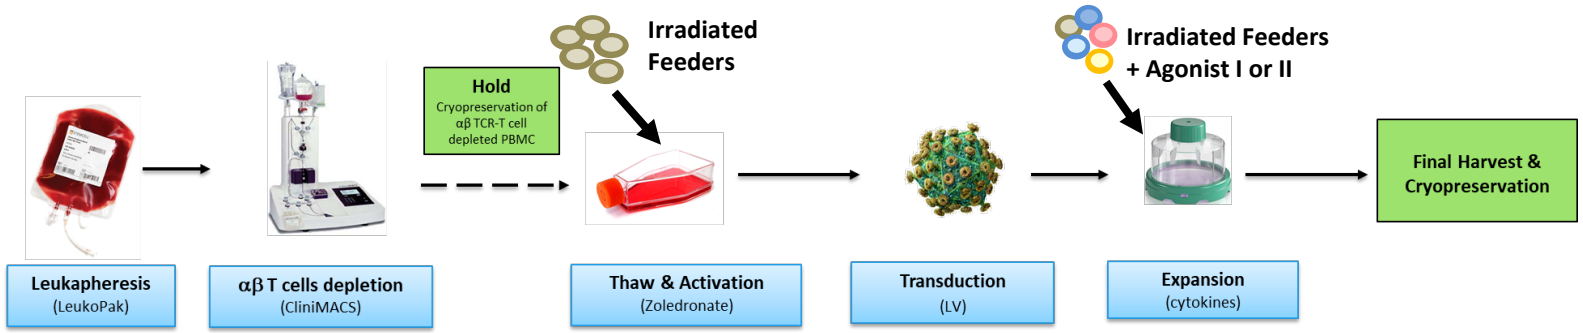
- Are **abundant** in the peripheral blood
- Show **intrinsic anti-tumor activity**
- **Naturally infiltrate** solid tumors and correlate with **favorable prognosis**
- Are HLA-independent, thus **do not cause GvHD** in allogenic setting
- Can be **expanded rapidly to high numbers** in a **cGMP-compliant manner**
- Can be effectively redirected using **αβ TCR or CAR constructs**
- **Are promising for an off-the-shelf cell therapy approach**

ACTallo® T cells recognize and kill tumor cells *in vitro*



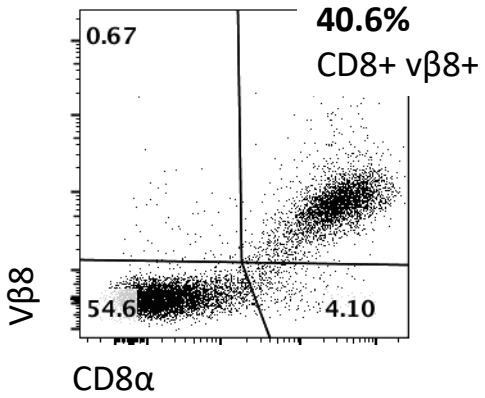
Tumor cells presenting target of interest (pHLA) at physiological levels

ACTallo® – Efficient Transduction & Robust Expansion of γδ T cells

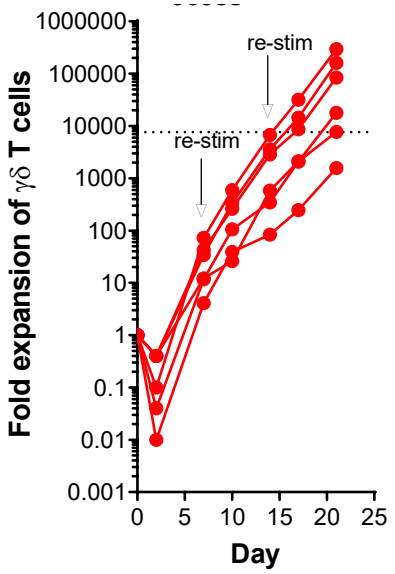


Proprietary lentiviral vector system

4-in-1 construct: TCRα + TCRβ + CD8α + CD8β



Process candidate



Transducing γδ T cells with a single vector might significantly reduce costs and complexity

Current processes have the potential for hundreds of doses from one single donor leukapheresis

for genetic engineering of autologous and allogeneic T cells and direct clinical application

Proprietary **XCEPTOR™** Platform TCR Discovery, Engineering and Validation

Fast and efficient discovery of **multiple TCRs per target**

Affinity-maturated natural TCR variable domains with **nanomolar affinity** and favorable **specificity** profile

XPRESIDENT®-guided **similar peptide counterselection** during maturation

Highly potent TCR Bispecifics format with **extended half-life** and **antibody-like stability** and manufacturability

TCER™ IMA401 Lead Shows Distinguished Specificity & Complete Tumor Eradication in Xenograft Models

Proprietary TCR Bispecifics Format

- TCER™ design confers superior potency and stability compared to multiple tested alternative bispecific formats
- **Significantly extended half life of several days** as compared to competitor molecules

Very High Potency

- Very low concentration (low pM range) required for in *vitro* killing of tumor cells expressing physiological levels of target pHLA
- **Complete tumor eradication *in vivo*** (tumor xenograft mouse model)

Distinguished Specificity

- Broad therapeutic window (≥ 1,000 – 10,000 fold) as defined by reactivity against tumor cells and healthy tissue cells

Favorable CMC Characteristics

- Excellent manufacturability in CHO cells
- Very stable compound (stress testing in PBS)

Patient Population

- Target-positive solid tumors, including cancers of the lung, head and neck, esophagus, sarcoma and several others

Tumor Xenograft Mouse Model

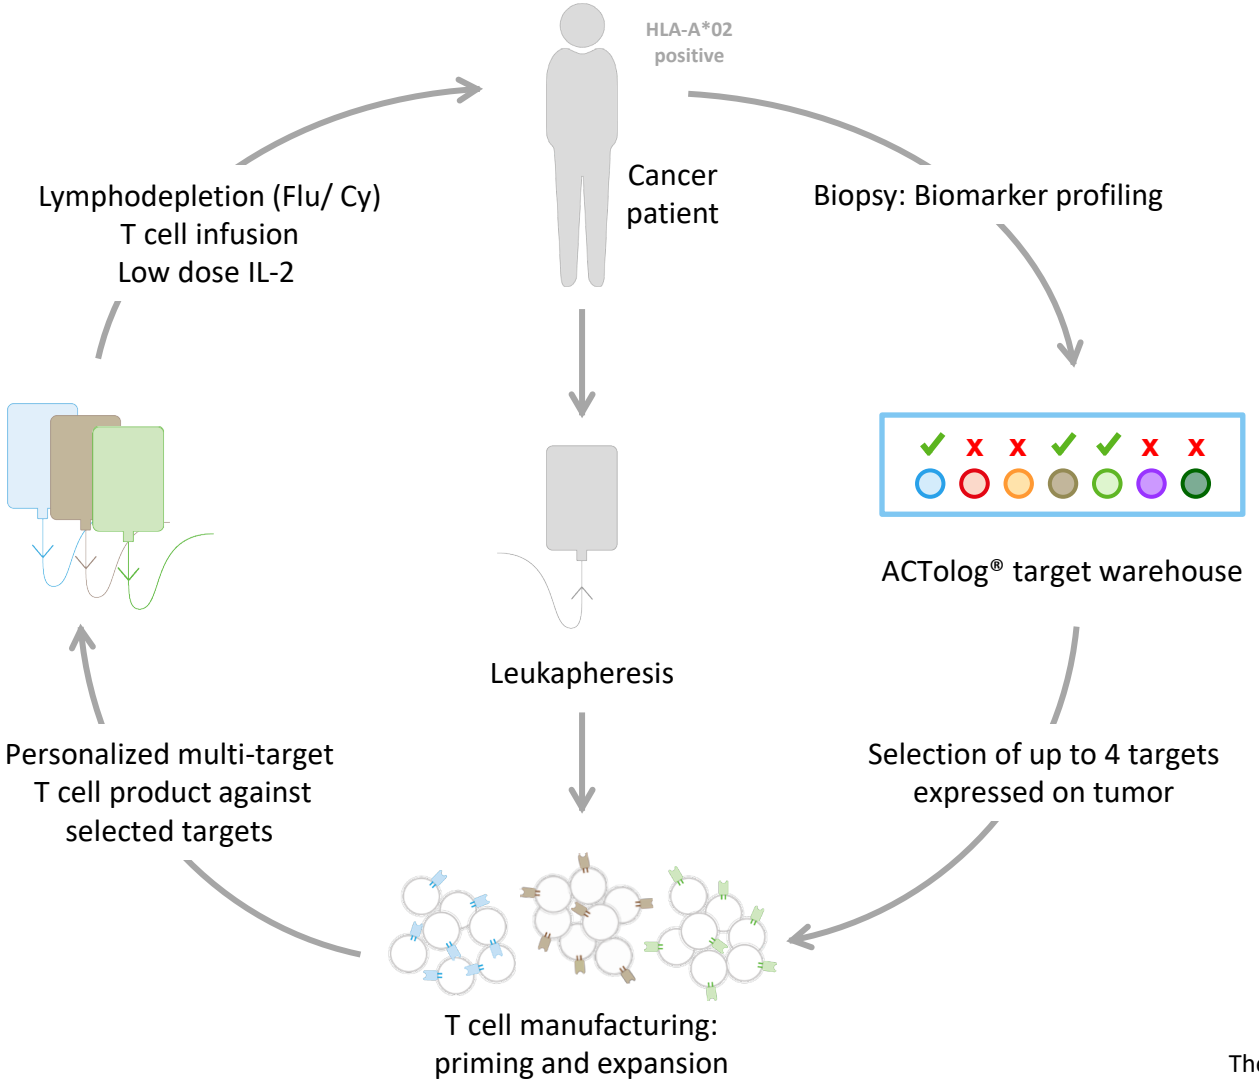
ACTolog® – Pioneering Personalized Multi-target T cell Therapy

Pilot Trial Using Autologous T cells Expressing Endogenous TCRs



ACTolog® IMA101

Approach	• Personalized multi-target T cell therapy using a warehouse approach • Autologous T cells, Endogenous TCRs • Clinical proof of concept previously delivered in melanoma by Cassian Yee (MD Anderson Cancer Center) with single target in combination with checkpoint inhibition [Chapuis *et al.*, Sci Transl Med (2013) and Chapuis *et al.*, JCO (2016)]
Indications	• Basket trial in solid tumors
Study Design/ Status	• First-in-human trial ongoing • Cohort 1 (ACTolog® only) • Cohort 2 (plus Atezolizumab) • Total of N=12 patients treated as of January 2020, up to N=20 planned

The ACTolog® program is supported by a grant of the Cancer Prevention & Research Institute of Texas (CPRIT)

ACTolog® – Pioneering Personalized Multi-target T cell Therapy

Preliminary Clinical Data as of January 2020

Patients
- 12 patients treated (various solid tumor indications).
- Median duration of disease of the patients was 4 years (range 2-18 years) with a median of 6 previous rounds of treatment (range 2-12).

Feasibility
- Very high ACTolog® cell doses (mostly >10^{10}) could be administered.
- Patients received mostly multi-target ACTolog® products (range 1-3).

Biological Response
- ACTolog® has led to high target specific T cell levels and persistence with total frequencies up to 80% of all peripheral CD8+ T cells.
- T cells exhibit a non-exhausted phenotype.
- Target specific T cells were detectable in post-treatment tumor biopsies

Safety Assessment
- ACTolog® IMA101 is well-tolerated to date with no changes to treatment regime required.
- The most common adverse events were expected cytopenias associated with the lymphodepleting regimen and Grade 1-2 cytokine release syndrome.

Preliminary Clinical Assessment
- Patients entered the trial with progressive disease, having failed the previous line of therapy.
- Median time to progression was ~12 weeks (range 6 weeks to 7 months) by RECIST1.1 (in some cases with transient tumor reduction of up to 26%).

Recent Achievements & Anticipated Upcoming News Flow

ACTengine®

Significantly increased clinical footprint for our ACTengine® programs

- Additional clinical trial sites have been initiated in Germany and the US
- Green light by the German regulatory authority for the IMA202 and IMA203 studies
- Screening of patients started and first product infusion in Europe

Extension of Collaboration with UTHealth until end of 2024

- Exclusive access to state-of-the art cGMP manufacturing infrastructure ensuring continued manufacturing and supply of T cell products for ongoing and planned early-stage ACT clinical trials

Two affinity-enhanced TCR candidates with high avidity, specificity, potency identified for the tumor stroma target COL6A3

- IND submission for the IMA204 program for 2021 on track

IMA201, IMA202 and IMA203 programs are on track for an initial combined data read-out in 1Q 2021

TCER™

IMA401 TCR Bispecific program is on track for an IND submission YE 2021

- Preparatory activities for GMP manufacturing of the lead TCER™ molecule IMA401 ongoing
- Additional IND-supportive data are being generated

Selection of lead candidate(s) for the IMA402 program planned for YE 2020

Next-Gen ACT

IMA301 program is on track for an IND filing in 2022

- Data update for the IMA301 program is expected for 3Q 2020

Topline data for the multi-target pilot study IMA101 planned to be presented at a scientific conference in 4Q 2020

- Screening and patient treatment for the multi-target pilot study IMA101 completed
